CHANNEL PLAYOUT

Encompass' Master Control environments are staffed 24/7 with operations and engineering experts. Our team of operators monitor the output of the primary and secondary feeds, satellite uplinks and downlinks as well as the digital streams for OTT/TVE solutions. Our managers verify each playlist, ensuring the overall reliability and quality of channel playout operations.

In addition to server-based content, we integrate live feeds for final distribution to any screen. Our staff leads the coordination efforts and works directly with client personnel to guarantee successful content distribution.

- 24/7 playout, monitoring, operations and engineering
- Traffic system integration
- As-run reporting
- OTT/TVE playout with live event integration
- Automated feed decoration triggers
- Commercial insertion
- Subtitles and closed captioning
- Advanced graphics, squeeze, snipes and lower thirds
- Live integration
- Traffic and ingest services
- 100% and software quality control
- Disaster recovery and archive management

We have a
playout solution
at any price point,
for any channel.

"We've had a positive experience with the entire Encompass team and the VOD services that they provide. Encompass' personnel are professional, dedicated and helpful. They offer invaluable expertise in delivery to digital platforms across our territory."

Jan-Hendrik Hein, Director of Media Operations and Post Production Services, A+E Networks UK

GOVERNMENT SERVICES

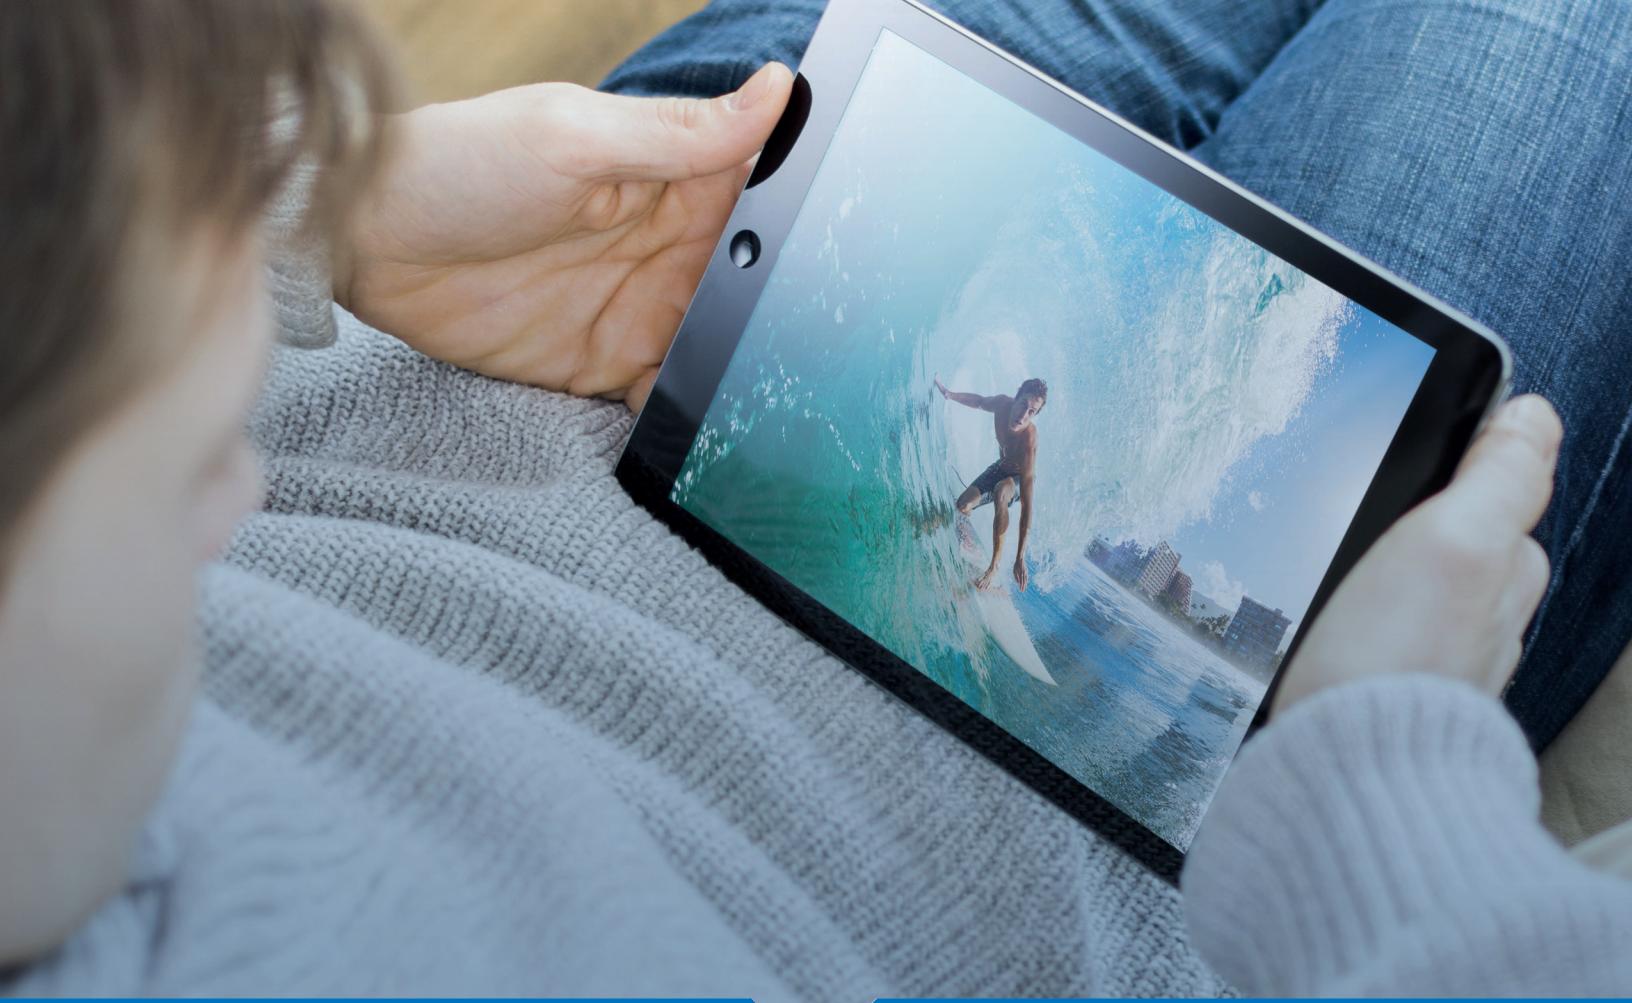

Encompass provides government organizations around the world – even in the most remote locations – with critical, secure communication links via our robust fiber and satellite infrastructure. Right now, our global network is supporting everything from small-unit tactical communications to major press events for world leaders. We also provide the distribution channels that allow public affairs/public information elements to fulfill their responsibilities to engage and provide current, complete and accurate information to the right audience at the right time.

- Global transmission and connectivity
- Remote transmission and event services
- End-to-end OTT/TVE solutions
- Digital asset and content management
- Disaster response
